

# Gen AI Bootcamp - Day 2 Homework Guide

## Task 1: Smart Product Recommendation Engine

Input a product and recommend complementary products. Example: Running Shoe -> Sports Socks, Fitness Watch, Water Bottle. Include recommendation logic, explanation, and visualization.

## Task 2: Unique Product Catalog Creation

Identify duplicate products using embeddings, group similar products, and generate a unique catalog.

## Task 3: Reverse Product Search

Allow users to search using text such as 'blue casual shirt' and return matching products using text embeddings.

## Submission Requirements

1. Source Code / Kaggle Notebook (.ipynb)
2. Short report with screenshots and explanation.
